

Ideas Documentation Report

First idea:

Image analysis and online search tool

Strengths:

Can be used in various fields, such as product recognition

Weaknesses:

Requires huge amounts of data and an advanced artificial intelligence model that exceeds current capabilities

Decision:

Rejected due to its complexity.

Second idea:

A tool for measuring student skills with the ability to link them to Github and display an integrated dashboard.

Strengths:

High educational and professional value.

Ability to link the tool to Github repositories.

The dashboard helps in providing detailed reports.

Weaknesses:

Portfolio Projects

Requires advanced algorithms to accurately determine skill levels

Difficulty in determining fair and accurate criteria

Other technical complexities

Decision:

Rejected due to implementation complexity

Third idea:

Qattah website, a simple financial project

Strengths:

Targets ordinary users and helps them organize their financial affairs.

Feasibility of design and implementation.

Potential for future expansion and development of the project.

Weaknesses:

Requires future plans for development.

Decision:

Portfolio Projects

The idea was accepted due to its feasibility and potential to be useful to all users.
